DETAILED ACTION

The prior art rejections are withdrawn because Applicant sent in a valid Terminal Disclaimer.

Cancellation of instant claim 10 is acknowledged. A new grounds of rejection is set forth below.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 58199185

A (English translation Abstract) to Okawa et al. (JP '185) in view of USPN 4810562 to Okawa et al.

JP '185 teaches an image changeable film which when contacted with water becomes transparent allowing an image to show through. The film is made of a liquid absorbable (porous resin) layer and has an aqueous coating having pigment and binder. When the film is adhered to printed matter and the opaque coating becomes wetted with water, it becomes transparent. The difference between the reference and the application is that the reference does not teach a water repellant layer. However, at least part of the film must be water repellant, otherwise the image would not show through. If the entire film structure is absorbable, the entire film would absorb the water, no image could be seen. Therefore, at least part of the opaque resin layer has to be water repellant. The reference does teach that the image shows through when the film is wetted. Further the Okawa '562 reference teaches that in water image changeable sheets must be prepared by using a water resistant transparent sheet. Col. 2, lines 37-40. This is done so the

image can show through. Okawa also teaches conventional pigments and binders as applicant includes (col. 3). It would have been obvious to one of ordinary skill in the art to include a water repellant layer because Okawa teaches that a water resistant (repellant) layer is required in the preparation of water image changeable films because a delamination resistant film must be used so that the image can be seen upon repeated application to water.

Allowable Subject Matter

3. Claims 8 and 9 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection. JP 58199185 A to Okawa et al. will be translated in full for the next action.
